

## **HUYK COMENIUS PROJECT 2008-2010:**

### **'Global Climate Change – Challenges for Europe'**

**A multilateral project with schools from England, Estonia and Spain.**

The first trip was in October 2009 and took place in Spain.

*Working together in groups at Les Maria Moliner School in Spain*

We were in Saguto, Spain during October 21st - 23rd . There were 3 teachers and 6 students with the group from Finland at the conference. We visited a beautiful Mediterranean school and worked together with our partner schools there. It was great to have a second summer in October since the school was less than a kilometer from the beach. We planned the activities that we would do before the final conference in England. We took trips into the countryside and hiked in the mountains nearby. The cork-tree plantations were something to see.

The second trip was in May 2010 and took place in England.

*Comenius Project work in Churston-Ferris Grammar School  
Designing a sculpture*

We were in South-West England, in Devon, for our final conference May 19<sup>th</sup> – 21<sup>st</sup>. There were 2 teachers and 4 students from our school on the trip. We were supposed to have the conference in late April but a certain volcano delayed our plans! We visited the Eden Project in Cornwall and saw quite a bit of that part of the world. We discussed climate change and the possible challenges for European citizens. Everyone walked away from our final conference with hope for the future and a commitment to keep the relationships we formed, between ourselves and our schools, strong in the years to come.

Our first Comenius project was a success and we're looking forward to the next project when 2 students will be studying at our Estonia partner's school for 5 months and 2 students will be studying at our Spanish partner's school for 5 months.
